

Polynomials degree stress prototype: Transfer

AUTHORED transfer

Subject: Mathematics

Topic: Polynomials

Concept: Find degree after like terms cancel

Concept difficulty: Medium concept

Question difficulty: Connected reasoning

Family: Degree after simplification

Question type: Constructed response

Provenance: Authored practice

Transfer: Representation translation

A coefficient table for $p(x)$ lists power 3: 0, power 2: 0, power 1: 0, power 0: 6. What is the degree of $p(x)$? Explain your decision from the table.

Builds on

- [Find the degree of \$5x^2 + 3x - 5x^2 + 4\$.](#)

Conditions

- Treat x as the only variable.
- Simplify before reading degree.

power 0

power 1

power 2

power 3

Powers

Where to start

Read the table as coefficients, not as four terms that must all appear.

Lineage check

Before you open the solution: what from the earlier item still holds here, and what is different?

Review and solution
